

Stefano La Rovere

System Engineering Manager – NIER Engineering

System and Nuclear Safety Engineer with over 20 years of experience in nuclear safety, systems engineering, and technical project management in the fields of nuclear fusion and fission. Since 2002, he has been working at NIER Ingegneria S.p.A., where he leads the Systems Engineering area, coordinating multidisciplinary teams in complex, safety-critical projects across nuclear (fusion and fission) and industrial sectors.

He has played key roles in international projects, particularly within the ITER framework, leading design and safety activities for safety-critical systems. He has also contributed to methodological developments related to Defence-in-Depth implementation and the safety classification of Structures, Systems and Components for nuclear fission and fusion installations, within international research and safety framework contexts.
