

Anthony Dufour is a research scientist at CNRS (The National Center for Scientific Research, France) working on the thermochemical conversion of biomass in Nancy. He did his PhD for the French Gas Company (GDF) in collaboration with several French research centers on biomass gasification. He joined the CNRS in 2008 where he currently supervises about 10 people on biomass thermochemical conversion. His main research interests are: analysis of biomass pyrolysis products (by mass spectrometry, in-situ analysis, etc.) and understanding of pyrolysis mechanisms, development of pyrolysis or gasification reactors, modeling of bioenergy routes (including forest growth and biomass supply chain), catalysis for tar cracking or bio-oils hydrodeoxygenation. He has published 50+ articles (1700 citations, h index = 23) mainly related to biomass pyrolysis and gasification. He is co-editor of the *Journal of Analytical & Applied Pyrolysis* (Elsevier) and was chairman of the international symposium PYRO2016 (www.pyro2016.com). He has worked with 100+ researchers (from academia and industry).
